

Instructions for filling in the new results sheet

Why has it changed?

The old sheet assumed that the singles and doubles players would be the same. When the doubles games are played by different players to the singles there is scope for recording the results, particularly the tons, against the wrong players. As the results will be published each week in their entirety (not just the top 10) it is essential to accurately record who plays and scores in both singles and doubles.

What has changed?

Not much. Fill in the home and away teams' names over the grey Home & Away.

There is now room for different players names in the singles and doubles games. Enter all the singles players' names in the boxes 1 to 6 and when there is a different doubles player enter the substitute's name in the second set of boxes in the correct line according to order of play. It is NOT necessary to fill in any names in the second set of boxes, only the result, if there are no substitute players in the doubles games and all tons scored can be recorded in the top section.

Please record all new signings with full names, and any transfers, on the reverse of the sheet.

Enter the tons & over in the box to the right of the player's name. Enter any checkout scores that a player scores in the same box, but suffixed with CO. i.e. 115CO.

It is all fairly obvious anyway, but an explanation never hurts.
